

Quiz ID: ZFM

Name: _____

Answers:

1.
2.
3.
4.
5.
6.
7.
8.
9.
10.

MAT 320**Quiz 1****Fall 2023**

- Factor the polynomial $p(x) = x^3 + 1$ into linear and quadratic factors. The quadratic factor is:
a) $x^2 + x + 1$ b) $x^2 - x + 1$ c) $x^2 + x - 1$ d) $x^2 - x - 1$ e) $x^2 + 1$
- Same polynomial $p(x)$ as in the previous question. Use the quadratic formula to find the two complex roots of the quadratic factor. One of them is:
a) $\frac{1}{4} - \frac{\sqrt{3}}{4}i$ b) $1 + \sqrt{3}i$ c) $-\frac{1}{2} - \frac{\sqrt{3}}{2}i$ d) $\frac{1}{2} - \frac{\sqrt{3}}{2}i$ e) $\frac{1}{4} + \frac{\sqrt{3}}{4}i$
- Let $q(x) = (x - (a + bi))(x - (a - bi))$ be a quadratic polynomial in factored form. Multiply out so that $q(x) = x^2 + c_1x + c_0$. What is c_1 ?
a) $a + bi$ b) $a^2 + b^2$ c) $-2bi$ d) $-2a$ e) $2a + 2bi$
- Same polynomial $q(x)$ as in the previous question. What is c_0 ?
a) $a + bi$ b) $a^2 + b^2$ c) $-2bi$ d) $-2a$ e) $2a + 2bi$
- Let $f(t) = e^{i4\pi t}$ be a phasor defined for all real numbers t , where t represents time in seconds. What is the frequency of this phasor measured in Hz (cycles per second).
a) 4 b) $\frac{1}{2}$ c) 2π d) 2 e) 4π
- Same $f(t)$ as in the previous question. What is the (smallest positive) period of f ?
a) 4 b) $\frac{1}{2}$ c) 2π d) 2 e) 4π
- Let $f_c(z)$ be a complex function $f : \mathbb{C} \rightarrow \mathbb{C}$ which multiplies the input complex variable z by the constant complex number $c = a + bi$. Assume f rotates z by an angle 120 degrees, or $\frac{2}{3}\pi$ radians, counterclockwise, and use this to solve for c . What is the real part a ?
a) $\frac{1}{2}$ b) -1 c) $-\frac{1}{2}$ d) 2 e) 1
- Same $f_c(z)$ as in the previous question. Find the Cartesian form for $f(e^{i\pi/3})$.
a) $\frac{1}{2} + \frac{\sqrt{3}}{2}i$ b) -1 c) $-\frac{1}{2} - \frac{\sqrt{3}}{2}i$ d) $-\frac{1}{2} + \frac{\sqrt{3}}{2}i$ e) 1
- Let $g(z) = \frac{1}{|z|}$ so that $g : \mathbb{C} \rightarrow \mathbb{R}$. Find $g(1 + i)$.
a) $\frac{1}{2}$ b) 1 c) $\frac{3}{2}$ d) $\frac{\sqrt{2}}{2}$ e) $\sqrt{2}$
- Same $g(z)$ as in the previous question. Find the maximum value of $g(z)$ for inputs $z = x + yi$ where $y = x - 1$.
a) $\frac{1}{2}$ b) 1 c) $\frac{3}{2}$ d) $\frac{\sqrt{2}}{2}$ e) $\sqrt{2}$
