

MUS 471 Syllabus

Semester: Spring 2019
Course title: Audio Design Project IV (Lecture)
Instructor: Matt Klassen
Time/Place: lectures: W 4:00 - 4:50 in Boulanger

COURSE DESCRIPTION:

This course continues to explore advanced topics in audio design and implementation. Lectures address issues that come up in audio programming at several levels: low level algorithms, mid-level components such as plugins and graphs, and high-level programming such as user interfaces and interactive music. Lecture topics include: audio engine design and implementation, spatial audio, and digital signal processing.

PREREQUISITES and COREQUISITES:

Prerequisites: MUS 470, MUS 470L

Corequisites: MUS 471L

COURSE GOALS AND OBJECTIVES:

- 1) Students learn the basic definitions and low-level algorithms in audio physical modeling
- 2) Students will become familiar with mid-level components and plugins
- 3) Students gain experience with user interface design for audio applications
- 4) Students will implement an application related to audio engine design, physical modeling, or digital signal processing

EXAMS:

There will be a midterm exam given during regular class hours, and a final exam.

DISABILITY SUPPORT SERVICES:

If students have disabilities and will need formal accommodations in order to fully participate or effectively demonstrate learning in this class, they should contact the Disability Support Services Office at (425) 629-5015 or dss@digipen.edu. The DSS office welcomes the opportunity to meet with students to discuss how the accommodations will be implemented. Also, if students need assistance in the event of an evacuation, they should let the instructor know.

GRADING:

Midterm Exam	20%
Homework	60%
Final Exam	20%

Grades will be determined based on total course percentage. Percentage scores will determine letter grades according to the scale: (in the worst case)

A	93 – 100
A-	90 – 92.9
B+	87 – 89.9
B	83 – 86.9
B-	80 – 82.9
C+	77 – 79.9
C	73 – 76.9
C-	70 – 72.9
D	60 – 69.9
F	< 60

ACADEMIC INTEGRITY:

Academic dishonesty, or cheating, occurs when a student represents someone else's work as their own, or assists another student in doing so. This can happen on exams, quizzes, homework, or projects. Academic dishonesty also may occur when a student uses any prohibited reference or equipment in the completion of a task. For example, the use of a calculator, notes, books or the internet when it is prohibited. Plagiarism is a common form of academic dishonesty. This can take the form of copying and pasting excerpts from the web, and representing them as original work. The type and severity of any occurrence, as well as the legitimacy of any claim of academic dishonesty, will be judged by the instructor and the disciplinary committee. All students are asked to help in promoting a culture of academic integrity by discouraging cheating in all forms.

GUEST SPEAKERS:

Guest speakers will be invited to speak on various topics relating to audio for games, audio for virtual and augmented reality, and spatial audio. Such guest speakers will come from DigiPen or from the audio community and industry leaders.

Such lectures will follow the example from MAT 399, Spring 2018:

Thursday, January 25, 9:00 am: Brian Schmidt, DigiPen, "*HRTF measurement with the dummy head, and HRTF implementation for games*"

Thursday, February 1, 9:00 am: Hannes Gamper, Microsoft, "*HRTF measurement and modeling*"

Tuesday, February 13, 9:00 am: Ravish Mehra, Oculus Research "*Data-driven approaches to HRTF personalization*"

Tuesday, February 27, 9:00 am: Ethan Geller, Epic Games, "*What spatial audio might look like in the next 5 years: personalization and channel agnostic audio engines and processing*"

MATERIALS:

Reference Materials: (not required)

Physical Audio Signal Processing, by Julius Smith.

Immersive Audio Signal Processing, Sunil Bharitkar and Chris Kyriaskakis

Analysis, Synthesis, and Perception of Musical Sounds, James W. Beauchamp, editor.

A User's Guide to Spherical Harmonics, by Martin Mohlenkamp.

Numerical Sound Synthesis, by Stephan Bilbao.

Immersive Sound: The Art and Science of Binaural and Multi-Channel Audio, edited by Agnieszka Roginska and Paul Geluso.

Spatial Hearing, by Jens Blauert.

Virtual Auditory Space: Generation and Applications, by Simon Carlile.

TENTATIVE WEEKLY TOPICS:

Week	Dates	Topics
1	Jan 8 - 12	(guest lecture) Introduction to sound modeling
2	Jan 15 - 19	Acoustic modeling with delay: digital waveguides, delay lines, comb and allpass filters
3	Jan 22 - 26	Feedback delay networks (FDN) for reverb simulation
4	Jan 29 - Feb 2	Interpolation of signals: from sample-rate conversion to windowed sinc interpolation
5	Feb 5 - 9	(guest lecture) User Interfaces for musical instrument modeling
6	Feb 12 - 16	Mass-spring systems, finite differences and numerical modeling
7	Feb 19 - 23	Modeling of transfer functions, resonators, and phasing
8	Feb 26 - Mar 2	(guest lecture) audio plugins: models, design and implementation
	Mar 5 - 9	Spring Break
9	Mar 12 - 16	(guest lecture) Modeling of brass and woodwind instruments, plucked and hammered strings
10	Mar 19 - 23	Finite differences and direct numerical simulation of models
11	Mar 26 - 30	Nonlinear models for strings, plates, and tubes
12	Apr 2 - 6	Frequency tracking analysis, vibrato modeling
13	Apr 9 - 13	Commutated synthesis, body-model factoring
14	Apr 16 - 20	Real-time timbre morphing, continuous timbre control space
15	Apr 23 - 27	Final Exams
